Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-38, 40-51, 53, 84, 85, 90-112, 114-126, and 128, drawn to an organic small pore area material, classified in class 428, subclass 315.5
- II. Claim 39, drawn to a sol-gel polymerization process, classified in class 516, subclass 190.
- III. Claims 52, 86-89, 113, and 127, drawn to a porous material, classified in class 428, subclass 304.4.
- IV. Claims 54-66, 68-83, and 129-139, drawn to a method of making an organic small pore area material, classified in class 516, subclass 115.
- V. Claim 67, drawn to a composition of matter, classified in class 252, subclass various.

The inventions are distinct, each from the other because of the following reasons:

Inventions (I, III, V) and (II, IV) are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the process as claimed can be used to make other and materially different product such as one that forms a solution in the absence of a solvent.

Inventions I, III and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to three different products. A porous material of invention III is not required to be crack-free whereas a composition of invention V is not required to be porous.

Inventions II and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to two different processes. A process of invention II is not required to include a step of removing all of the fluid portion of the sol gel.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Since the restriction is complicated and required more than three groups, a written restriction is deemed necessary.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
